August 15 th		
September 12 th		
October 10 th		Keil Kraftlet CD - Lurk
November 14 th		Trinity Tanner Scale. CD – Lurk
December 12 th		Christmas Elf CD – Tony Calvert (?)

These dates are confirmed.

Trinity Newsletter – Issue N^o. 1, 2026

If wet, in church hall.

Parish Notices

Flying at Trinity

When you arrive, please try and fill-in the corners and short edges of the hall first so as to leave the largest possible unobstructed area for flying.

The meetings are, mostly, sport-oriented; just turn up, pay and fly. However, there will sometimes be an informal, “just for fun” event which will be fitted-in around the sport flying so that it doesn’t disturb anyone who isn’t taking part.

FF & RC models are allocated half-hour slots, FF starting on the hour. FF models may be flown during the RC session, but you do so at your own risk.

If you are flying a FF model during the RC half hour please make absolutely sure that you don’t obstruct an RC flier’s view of his or her model. Especially when the RC model is being launched.

Trinity Dimensions & Model Suitability

The hall’s limiting dimensions are, roughly; 7m to bottom of the rafters and approximately 13m between the basketball nets and about 15m maximum.

For FF scale models a span of 17”-18” is a “safe” maximum, but models of up to 20” with a low wing loading have been flown successfully. As a rule of thumb, given the size of the hall, a model with a wing loading of about 10g/dm² or lower (without motor) is very likely to survive a session. Duration models usually have such a low wing loading that more or less anything of that sort can be flown, the limit being the rafters. RC models up to 24” span are regularly flown successfully.

Midland Flyers

This from Steve Haines

The group has has a nice size hall with an excellent ceiling height and when Peter Brown and I visited (17th Jan) there was a good turn out with about 15 in attendance. The models flown were mainly lightweights but also Bostonian and no cal.

There was talk of relocation to a new unit with a 70+ft ceiling height which is about 3+ times higher than Trinity. Anyone can affiliate to them on the BMFA website to receive their email.

Trinity Newsletter – Issue N^o. 1, 2026

If wet, in church hall.

Reg Bees

Reg was a true long time model aircraft enthusiast who embraced all aspects of the hobby although he preferred to stick to traditional building practices particularly with vintage style aircraft.

Reg was one of the earliest members of the Newbury club and could be seen most Sunday mornings with his very good friend Sid Roberts at the Racecourse when the club used the car park as their flying site. In bad weather he would be in the club caravan extracting the urine out of his latest project. He had a terrific sense of humour, very often self-deprecatory.

Reg was also an avid collector of model aircraft engines particularly early diesels. Many times when arriving late for an indoor flying session his excuse was that he had to visit a local boot sale looking out for more engines and he was often successful.

Another one of the good guys sadly gone.

Rob Smith

Reg

December

The Xmas Elf saw a high turnout and most in attendance were concentrating on getting results in for that, but some other models were flown and in what has become a very welcome tradition “Bernie” Brown provided some of her delicious home made sausage rolls. If you’re reading this Bernie, thank you very much, the gannets made very short work of them.

New Faces

Alan Trinder and Bob Lee, who some of you may know from OMFC joined us in December. Welcome to the parish gents, we hope you’ll enjoy flying with us.

The Christmas Elf

This is definitely the most popular event of the year with the vast majority of the parish taking part and only a few scale obsessed die-hards choosing not to have a great time with one of Bill Dean’s best designs. As usual nearly everyone managed to get times logged, but, again as usual, a few normally well behaved elves weren’t. I blame the kiddies for leaving all that sherry out for their Boss, they can’t resist it you know.

Tony has decided that the Xmas Elf will now *borrow* the Schneider Cup rule; if anyone manages to win on 3 successive occasions they will be allowed to keep the cup.

January

January already? Where did 2025 go, eh? A pretty good turnout considering the weather in the run up to Saturday and the icy conditions on the day.

Delayed Themed Scale – High Wing Monoplane

About 20 people had entered, but a mix of weather conditions, illness and family responsibilities meant a good number of those who'd hoped to participate couldn't. In a complete break with his usual practice Steve Haines decided to fly a brand new, untrimmed Pistachio Fike. It did not go as well as he'd hoped. Oh well. Mike Stuart was forced to make a late substitution when he found that his planned entry hadn't been repaired after its last outing but took the "prettiness" prize for his substitute so it wasn't all bad.

A special nod to Roger Butler & Paul Masterman who I, umm, *persuaded* to take part with incompletely trimmed models. Paul had to abandon with a busted model. Thanks chaps.

Andy Blackburn also gets a special mention for dedication. He spent an hour rebuilding and reshaping the prop for his BD4 after it was broken very early on. You'll see he still managed to make the top 4.

Frogwell Flyer Challenge

You may remember that after last year's March Single design comp for Richard's Frogwell Flyer that, because a number of models had got within spitting distance of 60s, Steve Haines wondered if anyone could or would break one minute with a Frogwell Flyer. Well the challenge was issued, tempting prizes offered and... well not quite nothing, but not far off.

There was one determined soul who spent a great deal of time trying to get a Frogwell Flyer to 60s or better; he even built a second, lighter model to see if this would help. Sadly our for our Sisyphus he never got an official 60s flight in. However, he did get one, single, solitary unofficial 61s flight at the November meeting.

In recognition of both a single flight proving that a Frogwell Flyer *will* fly for 60 or more seconds at Trinity and for months of dogged persistence in trying to repeat that proof step forward... Paul Masterman.

Paul
(Unofficial) Winner
Frogwell Flyer Challenge

Trinity Newsletter – Issue N^o. 1, 2026

If wet, in church hall.

November's Models

Richard Preston

As I wrote in the last issue our Richard's a busy wee bee and he had another new one to amuse us. It's not been named yet, but it may end up being called, "The Tripper". It's micro RC & uses differential motor control for steering and throttle "blipping" for climb & descent. Shows promise, see the January newsreel.

As Yet Unnamed
Photos: Staff

Mick Langford

I really wish I'd taken more photographs of this. It's Mick's rendition of the VMC Me Bf-109 kit and it is *lovely*. It does fly, but it doesn't yet want to fly in circles.

VMC Bf-109

John Winfield

Did I miss a memo? There's seems to be the some sort of Hangar Rat outbreak underway. John's example is shown below as his Veron Nieuport 27 which is delightfully light.

Hangar Rat
Photo: Staff

Veron Nieuport 27
Photo: Staff

Bob Lee

This is Bob's foam version of the Bill Dean F4D Skyray CLG. He built it for OMFC's scrap box challenge which requires the model to be built solely from materials and components already in the modeller's stores / scrap pile. Construction is 2mm Depron wing and a laminated fuselage with two 1mm layers around a 3mm core. Bob didn't try any powered launches, but the test glides were very reassuring.

F4D Skyray
Photo: Chris Brainwood

Trinity Newsletter – Issue N^o. 1, 2026

If wet, in church hall.

Rob Smith

Rob had a lovely new RC SE5A from the discontinued Falcon kit that he bought from Ray. Rob reckons it's a good kit, it even comes with a two part vacuum formed pilot. It seems to me to fly slightly faster than his Bristol Scout, but it's easily slow enough for Trinity, see Chris' January footage, so I think, I hope, we're going to see a lot more of it.

Trinity Newsletter – Issue N^o. 1, 2026

If wet, in church hall.

Mike Stuart

Mike continues with his deep seated interest in the Blackburn company's interwar torpedo bomber designs. This is the Ripon and a lovely piece of work it is too. The built weight is about 28g and trimming was coming together nicely. One of the trimming flights can be seen in the January newsreel. On the basis of that I have high hopes of seeing this one flying at Trinity.

Fans of out of the way schemes might be interested to know that Mitsubishi built a slightly enlarged version of the Ripon (Blackburn design T7 B) under licence as the B2M for the Imperial Japanese Navy

Indoor International Fly-In – Steve Haines

Last November was the 13th international indoor fly-in and, for the second time, I was kindly asked to go by Trinity flyer Mike Stuart.

One big difference this year was a change of hall due to the previous one having being demolished to make way for a new hall. The replacement hall was located on the edge of Nijmegen at a town called Wijchen and it was good to see it was similar in size to Walsall where the UK Indoor Scale Nationals are held. Another big plus was the pits, one thing I've noticed over the last two years is how friendly and helpful fellow competitors are with advice on hand if needed.

Unfortunately there was no Friday afternoon/evening trimming session but there were slots for trimming over the weekend.

Saturday arrived and the competition started, there were competitors from all over Europe, and as you can see from the pictures below the models were superb and of a very high standard.

I was pleased with how my models performed and two personal stand outs were my No-Cal Gannet which managed to beat its previous PB by 40secs with times of 1.55 and 2.02 to place it 6th overall.

I was also delighted to come joint 4th place in kit scale with Taylorcraft with fellow Trinity flyer Mike Stuart who was flying his Luscombe Phantom. It was a great way to finish another brilliant weekend. I would recommend going to everyone as it's such a superb experience.

Work In Progress

John Whatmore – Sonex Highwing

This is a collaborative effort. John's doing the test build of an electronic version of the plan drawn by Lurk from Richard Preston's original glorified three view hand-drawn "plan" taken from some YouTube screenshots. Bootleg or samizdat? You decide. Either way, when all the nits have been picked out of the plan and the model trimmed and photographed *in flight* an article will be submitted to AeroModeller for use as a free plan.

Lurk – 1/18th Chiribiri N^o. 5

Getting on for six years ago Pete Fardell organised a lock-down Walt Mooney cook-up on HPA. It was a great success. My contribution was Mooney's peanut scale Chiribiri No.5. I was pleased with it and it flew. It had one major drawback, the undercarriage was terribly frail. This meant the model spent more time at the back of the hangar being repaired than it did being flown. This is an approx 1/18th scale version (just under 20" span) based on my rescaled and tweaked version of the Mooney plan. I'm hoping that at this larger size I can make the undercarriage strong enough (without making it overly heavy) to withstand the odd heavier landing but it will still be small enough to fly within Trinity's bounds.

Hip Pocket Aeronautics

As you probably already know all the data, posts and plans, held on the old Hip Pocket Aeronautics site were irretrievably lost late last year. A combination, I am told, of errors by both Bruce & the hosting company. Bruce has decided he's had enough and will be using the site for an aeromodelling accessories business.

The good news is that Γιώργος Κανδηλάκης has set up, with Bruce's blessing, a new, English language, site at <https://hpa.aeromodelling.gr/>

The new site is biased firmly in favour of FF and small RC / RC assist reflecting where most, very nearly all, of the activity on the old HPA was.

Given the recent problems with the previous version of HPA you will, I hope, be reassured to know that Γιώργος and his friend Σεραφείμ (Serafim) have been running a Greek language aeromodelling site, www.aeromodelling.gr, for very nearly as long as HPA had been running without any interruptions to service.

As I write this there are nearly 130 members signed, up both refugees from old HPA and fresh faces, and new topics, including builds are active.
